Education

University of Massachusetts Amherst Expected May 2026
Bachelor of Science in Computer Science — GPA: 3.78/4.0 Amherst, MA
– Coursework: Algorithms, Data Structures, Operating Systems, Web Programming, Databases, Machine Learning

Experience

AI Trainer Fellow @ Handshake AI | San Francisco, CA Oct. 2025 – Present

- Evaluated AI-generated responses for safety, accuracy, and compliance, identifying high-risk edge cases to improve model reliability before production release
- Designed adversarial tests to surface model weaknesses and improve robustness across user inputs
- Improved data quality workflows through rapid experimentation, reducing annotation errors by **30%**

Software Engineer @ ChitChat Workplace | Boston, MA Apr. 2025 – Present

- Built a unified messaging platform (chat, email, video, calendar) using Next.js, TypeScript, GraphQL, Kafka, and WebSockets, reducing context-switching by **10+ hours/month**
- Integrated GPT-4o drafting, summarization, and notifications using LangChain & Pinecone (RAG)
- Deployed scalable infrastructure with Kubernetes & Docker supporting **5,000+** daily messages

Software Engineer Intern @ GBCS Group | Alberta, CA Mar. 2025 – Sept. 2025

- Migrated **8** REST APIs to GraphQL, reducing overfetching and simplifying client data access
- Optimized React Query, code splitting, and PostgreSQL indexes to cut page load times by **35%**
- Shipped reusable TypeScript and Tailwind components and strengthened code quality by implementing linting rules, Jest utilities, and component documentation

Undergraduate Student Researcher @ UMass Amherst | Amherst, MA Dec. 2024 – Feb. 2025

- Identified critical LLM safety gaps through systematic prompt stress-testing across risk categories
- Shaped deployment decisions by formalizing safety benchmarks used in model evaluation workflows

Projects

UMass Dining Recommendation Engine | Java, Spring Boot, React, PostgreSQL June 2025

- Developed full-stack dining recommender for UMass Amherst students, delivering personalized meal suggestions based on dietary preferences, favorite halls, and disliked ingredients
- Designed Spring Boot & PostgreSQL backend with caching and a responsive React frontend, supporting real-time queries for **4** dining halls and **100+** menu items per day.

LLM Prompt Safety Detector | Python, PyTorch, scikit-learn, NLP February 2025

- Built automated system to identify unsafe LLM prompts in **500+** test cases using Python & PyTorch
- Standardized safety testing for GPT-4, Claude, and Llama, cutting manual review effort by **70%**

Multi-User Payment Hub | Typescript, Next.js, PostgreSQL, Solidity October 2025

- Built a secure group payment platform enabling users to create, manage, and settle recurring or one-time payments with automated payment tracking and dispute resolution
- Implemented data-driven reliability scores, stake-based incentives, and weighted dispute voting to improve payment timeliness and reduce conflicts among users

Technical Skills

Languages: Python, JavaScript, TypeScript, Java, C++, SQL, HTML/CSS, Bash/Shell

Tools/Frameworks: Web (*React, React Native, Next.js, Tailwind*), Backend & Cloud (*Spring Boot, FastAPI, Docker, Kubernetes, AWS, Azure, CI/CD*), Databases & Data (*PostgreSQL, MongoDB, Redis, Kafka, Pandas, NumPy, PyTorch, TensorFlow, Scikit-learn*)
